# UNIVERSITY OF ENGINEERING AND MANAGEMENT, KOLKATA

## DEPARTMENT OF COMPUTER APPLICATIONS

## **PROGRAM: MASTER OF COMPUTER APPLICATIONS**

DETAILED SYLLABUS

## BATCH: 2022 – 2024

UNIVERSITY OF ENGINEERING & MANAGEMENT, NEW TOWN, UNIVERSITY AREA, PLOT NO. III, B/5, NEW TOWN RD, Action Area III, Newtown, New Town, West Bengal 700160

## Table of Contents

Syllabus Structure	1
1 <sup>st</sup> Year 1 <sup>st</sup> Semester	1
1 <sup>st</sup> Year 2 <sup>nd</sup> Semester	2
2 <sup>nd</sup> Year 1 <sup>st</sup> Semester	3
2 <sup>nd</sup> Year 2 <sup>nd</sup> Semester	4
Syllabus for MCA Admission Batch 2022, 1st Semester	5
MCA101: Computer Organisation and Architecture	5
MCA191: Micro Programming and Architecture Laboratory	8
MCA102: Computer Programming with C	10
MCA192: C Programming Laboratory	13
MCA103: Data Structure with C	17
MCA193: Data Structures with C Laboratory	20
MCA104: Discrete Mathematical Structure	24
MCA105: Business English and Communication	26
MCA(GS)101: Mental Maths For Professionals - I	29
MCA(GS)181: Competitive Aptitude Training – I	32
Syllabus for MCA Admission Batch 2022, 2nd Semester	35
MCA201: Database Management System	35
MCA291: Database Management System Laboratory	38
Annexure – I (SQL based Lab – Assignments)	39
MCA202: Object-Oriented Programming	44
MCA292: Object Oriented Programming with Java Laboratory	47
Annexure – I (Programming Based Lab – Assignments)	48
MCA203: Data Communication & Computer Networks	53
MCA206: Data Science and Data Analytics	56
MCA293: Data Science and Data Analytics Laboratory	59
MCA(GS)201: General Studies & Current Affairs - II	62
MCA(GS)281: Competitive Aptitude Training – II	64
Syllabus for MCA Admission Batch 2022, 3 <sup>rd</sup> Semester	66
MCA301: Operating Systems and Systems Software	66
MCA393: Operating Systems Laboratory (Unix)	68
MCA304: Software Engineering & TQM	70
MCA394: Software Project Management Laboratory	72
MCA306: Environment and Ecology	74
MCA307: Statistics and Numerical Techniques	77
MCA(GS)301: Essential Studies for Professionals-III	79

MCA(GS)381: Competitive Aptitude Train	ing – III
MCA391: Minor Project	
MCA383: Entrepreneurship	
MCA381: Industrial Training	
Syllabus for MCA Admission Batch 2022, 4th S	Semester
MCA401A: Distributed Database Manager	nent
MCA401B: Image Processing	
MCA401C: Parallel Programming	
MCA401D: Cloud Computing	
MCA402A: Compiler Design	
MCA402B: Mobile Computing	
MCA402C: Embedded Systems	
MCA403: Values and Ethics	
MCA405: Management & Accounting	
MCA(GS)401: General Studies & Current	Affairs - IV113
MCA(GS)481: Competitive Aptitude Train	ing – IV116
MCA491: Major Project

## 2<sup>nd</sup> Year 2<sup>nd</sup> Semester

## University of Engineering and Management, Kolkata

## Syllabus for MCA Admission Batch 2022, 1st Semester

Course Name: Computer Organisation and Architecture Credit: 3

**Course Code: MCA101** 

Lecture Hours: 40

Name of the Course: Computer Organization and Architecture						
Course Code: MCA	101	Semester: 1 <sup>st</sup>				
Duration: 40 Hrs.		Maximum Marks: 100				
Teaching Scheme		Examination Scheme				
Theory: 3		End Semester Exam: 100				
Tutorial: 1		Continuous Assessment: 100				
Credit: 3						
Aim:						
1	To have a thorough un of a digital computer.	derstanding of the basic structure and operation				
2	To study the different standard I/O interfaces	communication methods with I/O devices and 3.				
3	To learn the architectu microprocessor.	re and assembly language programming of 8085				
Objective:	· •					
1	Understanding Logic ga	tes, flip flops and counters.				
2	Clear Understanding of Computer Architecture.					
3	Clear Understanding of Pipeline processing, RISC and CISC architectures.					
4	Develop a base for advanced microprocessors.					
Pre-Requisite:						
1.	Proficiency in basic D	igital Electronics				

5

Course Outcome:	
1.	Summarize the fundamental components of a basic computer system and its organization.
2.	Apply arithmetic and logical microoperations of binary number systems.
3.	Analyze control unit design and concept of pipelining.
4.	Classify memory hierarchy and examine numerical problems based on it.

CO s	PO 1	PO 2	PO 3	PO 4	РО 5	PO 6	РО 7	PO 8	PO 9	PO1 0	PO1 1	PO1 2	PSO 1	PSO 2	PSO 3

CO 3	2	2	3	3	-	-	1	-	-	2	-	2	-	-	-
CO 4	3	2	3	2	-	-	-	-	-	2	-	2	-	-	-

Module number	Торіс	Sub-topics
1	Structure of Computers and Computer Arithmetic	Computer types, Functional units, Basic operational concepts, von Neumann Architecture, Bus Structures, Software, Performance, Multiprocessors and Multicomputer, Data representation, Fixed and Floating point, Error detection and correction codes Addition and Subtraction, Multiplication and Division algorithms, Floating-point Arithmetic Operations, Decimal arithmetic operations.
2	Basic Computer Organization and Design	Instruction codes, Computer Registers, Computer Instructions and Instruction cycle. Timing and Control, Memory-Reference Instructions, Input-Output and interrupt. Central processing unit: Stack organization, Instruction Formats, Addressing Modes, Data Transfer and Manipulation, Complex Instruction Set Computer (CISC) Reduced Instruction Set Computer (RISC), CISC vs RISC.
3	Register Transfer, Micro-Operations and Micro- Programmed	Register Transfer Language, Register Transfer, Bus and Memory Transfers, Arithmetic Micro-Operations, Logic Micro- Operations, Shift Micro-Operations, Arithmetic logic shift unit,

	Control	Control Memory, Address Sequencing, Micro-Program example, Design of Control Unit.
4	Memory System:	Memory Hierarchy, Semiconductor Memories, RAM(Random Access Memory), Read Only Memory (ROM), Types of ROM, Cache Memory, Performance considerations, Virtual memory, Paging, Secondary Storage, RAID.
5	Input-Output:	I/O interface, Programmed IO, Memory Mapped IO, Interrupt Driven IO, DMA.
6	Multiprocessors	Characteristics of multiprocessors, Interconnection structures, Inter Processor Arbitration, Interprocessor Communication and Synchronization, and Cache Coherence.

List of Books Text Books:							
Name of Author	Title of the Book	Edition/ISSN/I SBN	Name of the Publisher				
M. Moris Mano	Computer System Architecture	3 <sup>rd</sup> Ed	Pearson/PHI				
<ul> <li>Reference Books:</li> <li>1. Carl Hamacher, Zvonks Vranesic, SafeaZaky (2002), Computer Organization, 5th edition, McGraw Hill, New Delhi, India.</li> </ul>							

Name of the Course: Computer Organization and Architecture						
Course Code: MCA	.191	Semester: 1 <sup>st</sup>				
Duration: 12 Week	s.	Maximum Marks: 100				
Teaching Scheme		Examination Scheme				
Practical: 3		Practical Sessional Internal continuous evaluation: 100				
Credit: 3		Practical Sessional external examination: 100				
Aim:	-					
1	To have a th of a digital c	orough understanding of the basic structure and operation computer.				
2	To study the standard I/O	e different communication methods with I/O devices and interfaces.				
3	To learn the microproces	architecture and assembly language programming of 8085 sor.				
Objective:						
1	Understandin	g Logic gates, flip flops and counters.				
2	Clear Unders	tanding of Computer Architecture.				
3	Clear Unders	tanding of Pipeline processing, RISC and CISC architectures.				
4	Develop a ba	se for advanced microprocessors.				
Pre-Requisite:						
1.	Proficiency	in basic Digital Electronics				
Course Outcome:	1					
1.	Summarize the and its organiz	e fundamental components of a basic computer system ation.				
2.	Apply arithme	tic and logical microoperations of binary number systems.				
3.	Analyze contro	ol unit design and concept of pipelining.				
4.	Classify memo	ory hierarchy and examine numerical problems based on it.

Module	Торіс	Suggested Assignments
Number		
1	Structure of	1. Write a VHDL code to study and perform about logic
	Computers and	gates.
	Computer	2. Write a VHDL code to study and perform about
	Arithmetic	De'Morgan's Theorem.
		3. Write a VHDL code to study and perform about
		NAND and NOR as a universal gates.
		4. Write a VHDL code to design and implement circuit
		that converts binary code to gray code.
2	<b>Basic Computer</b>	1. Write a VHDL code to study and perform about Half
	Organization and	Adder and full Adder.
	Design	2. Write a VHDL code to study and perform about Half
		substractor and full substractor.
		3. Write a VHDL code to design 3-bit odd/even parity
		generator and checker.
		4. Write a VHDL code to study and perform about R-S
		and D flip flop.
		5. Write a VHDL code to study and perform about J-K
		and T flip flop.
		6. Write a VHDL code to study and perform about
-		Master slave JK flip flop.
3	Register Transfer,	1. Write a VHDL code to realize Boolean functions
	<b>Micro-Operations</b>	using multiplexer.
	and Micro-	2. Write a VHDL code to study and perform about
	Programmed	Decoder and Demultiplexer.
	Control	3. Write a VHDL code to study the use of decoder for
		BCD to seven segment LED display.
		4. Write a VHDL code to study universal shift register

**Course Name: Computer Programming with C** 

#### **Course Code: MCA102**

#### Lecture Hours: 40

Name of the Course: Computer Programming with C					
Course Code: MCA1	.02	Semester: 1st			
Duration: 40 Hrs.		Maximum Marks: 100			
<b>Teaching Scheme</b>		Examination Scheme			
Theory: 3		End Semester Exam: 100			
Tutorial: 1		Continuous Assessment: 100			
Credit: 4					
Aim:					
1	To gain Knowledge of	Various aspects of algorithm development			
2	To enhance Ability to	identify qualities of a good solution			
3	To implement learned to solve problems.	algorithm design techniques and data structures			
Objective:					
1 The fundamental design structures.		analysis, and implementation of basic data			
2	Basic concepts in the spe	ecification and analysis of programs.			
3	Principles for good prog	gram design, especially the uses of data abstraction.			
4	Significance of algorithm	ns in the computer field			
Pre-Requisite:					
1.	Proficiency in one high	h-level programming language			
Course Outcome:	-				
1.	will be able to develop sir constructs	nple applications in C using basic			
2.	will be able to design and implement applications in C using Arrays and Strings				
3.	will be able to design and and Pointers	implement applications in C using Functions			
4.	will be able to develop ap applications using sequen	plications in C using the Structures and design tial and random-access file processing.

Module	Торіс	Sub-topics
number	Paging of (C)	Even domentale of algorithms:
1	Dasics of C Programming	Fundamentals of algorithms:
	Trogramming	Notion of algorithm, Notations used for assignment statements and basic control structures.
		Introduction to 'C': General structure of 'C' program, Header file, 'main ()' function.
		Fundamental constructs of 'C': Character set, tokens, keywords, Identifiers, Constants - number constants, character constants, string constants, Variables. Data types in 'C': Declaring variables, data type conversion.
		Basic Input and Output functions: input and output statements using printf(), scanf() functions.
		Assignments and expressions: simple assignment statements, arithmetic operators, shift operators, bitwise operators, sizeof operator
2	Control	Conditional statements: Relational operators, logical operators,
	structures	if statement, if-else statements, nested if-else statements, if-else
		ladder, switch statement.
		Looping statements: while loop, do-while loop, for loop.
		Branching Statements: goto statement, use of 'break' and
3	Arrays and	Characteristics of an array One dimension and two dimensional
5	structure	arrays, concept of multi-dimensional arrays. Array declaration
		and Initialization. Operations on Arrays. Character and String
		input/output and String related operations. Introduction and
		Features of Structures, Declaration and Initialization of Structures, array of structures. Type def. Enumerated Data Type
4	Functions	Concept and need of functions
Т	i unctions	Library functions: Math functions, String handling functions,
		other miscellaneous functions such as getchar(), putchar(),
		malloc(), calloc().
		Writing User-defined functions - function definition, functions
		declaration, function call, scope of variables - local variables,
		gioual valiables. Function parameters: Parameter passing, call by value & call by
		reference, function return values, function return types,

		declaring function return types, The 'return' statement.
		Recursive functions.
5	Pointers	Introduction to Pointers: Definition, use of pointers, '*' and
		'&' operators, declaring, initializing, accessing pointers.
		Pointer arithmetic.
		Pointer to array.
		Pointer and Text string.
		Function handling using pointers. Pointers to structure.
6	File handling	Creation of the new file
		Opening an existing file
		Reading from the file
		Writing to the file
		Deleting the file

Module	Торіс	Suggested Assignments
Number		
2	<b>Control structures</b>	1. Write a C program to find sum and average of three
		numbers.
		2. Write a C program to find the sum of individual digits
		of a given positive integer.
		3. Write a C program to generate the first n terms of the
		Fibonacci sequence. metrices from the console, verifies
		if metrics multiplication is possible or not. Then
		multiplies the metrices and prints the 3rd metrics.
		4. Write a C program to generate prime numbers between
		1 to II. 5 Write a C program to Check whether given number is
		Armstrong Number or Not
		6 Write a C program to evaluate the algebraic expression
		(ax+b)/(ax-b)
		7. Write a C program to check if the given number is
		perfect number?
		8. Write a C program to check if given number is strong
		0 Write a program to print your name without using any
		semicolon in the program
		10 Write a program to convert temperature in Celsius to
		Fahrenheit and vice-versa.
		11. Write a C program to check whether a number is
		Palindrome or not.
		12. Write a C program to find maximum between two
		numbers.
		13. Write a C program to find maximum between three
		numbers.
		14. Write a C program to check whether a number is
		negative, positive or zero.
		15. Write a C program to check whether a number is
		divisible by 5 and 11 or not within the range 100 to 500.
		16. Write a C program to check whether a number is even
		or odd.
		17. Write a C program to check whether a year is a leap
		year or not.
		18. Write a C program to check whether a character is
		alphabet or not.
		19. Write a C program to input any alphabet and check
		Write a C program to input any character and check
		20. While a C program to input any character and check whether it is an alphabet digit or special character
3	Arrays and	1 Write a program to store marks for n number of
	structure	student in an array and print their marks
		2. Write a program which stores the marks of subject
		Mathematics and English of n number of students in an
		array and then prints their individual total marks.
		3. Write a program to insert an element in an array in a
		particular position.
		4. Write a program to delete an element from a particular
		position of an array.

<ul> <li>Write a program to convert a decimal number taken as input from user to corresponding binary number and store the result in an array.</li> <li>Write a program to input a binary number in an array and convert into corresponding decimal number.</li> <li>Write a program to find the smallest and the largest elements in an array.</li> <li>Write a program to search for a particular element in an array.</li> <li>Write a program to sort n elements (ascending order).</li> <li>Write a program to sort n elements (ascending order).</li> <li>Write a program to perform addition and subtraction between two matrices.</li> <li>Write a program to the elements of each row and each column of a matrix.</li> <li>Write a program to check whether a matrix is identity matrix or not.</li> <li>Write a program to check whether a matrix is sparse matrix to rot.</li> <li>Write a program to check whether a matrix is sparse matrix or not.</li> <li>Write a Corparam to check whether a matrix is sparse matrix or not.</li> <li>Write a Corparam to reade a structure named company which has name, address, phone and no Of Employee. Finally display these members' value.</li> <li>Define a structure "complex" (typedef) to read two complex numbers and display the result.</li> <li>Write a C program to reade Roll No, Name, Address, and Age marks of 12 students in the BCT class and display the details from the function.</li> <li>Write a C program to calculate sum of first 20 natural numbers using recursive function.</li> <li>Write a C program to generate Fibonacci series using recursive function.</li> <li>Write a C program to ada, subtract, multiply and divide two integers using a user-defined type function with return type.</li> <li>Write a C program to ada, subtract, multiply and divide two integers using recursive function.</li> <li>Write a C program to ada and fibon ad minimum between two numbers using functions.</li> </ul>			~	<b>XX 7</b> 1 1 1 1 1 1
4       Functions         4       Functions         4       Functions         1       Write a C program to a day subtract, multiply and divide two integers using a user defined tist of the standers in digital y the set work of the astrogram to find the standers in digital y the display the set multiply and divide two integers using a user defined tight with the array.			5. #### **Course Name: Data Structure with C**

#### Credit: 4

#### **Course Code: MCA103**

#### Lecture Hours: 40

Name of the Course:	Data Structure with C					
Course Code: MCA1	03	Semester: 1st				
Duration: 40 Hrs.		Maximum Marks: 100				
Teaching Scheme		Examination Scheme				
Theory: 3		End Semester Exam: 100				
Tutorial: 1		Continuous Assessment: 100				
Credit: 4						
Aim:						
1	To gain Knowledge of	Various aspects of algorithm development				
2	To enhance Ability to	identify qualities of a good solution				
3	To implement learned to solve problems.	algorithm design techniques and data structures				
Objective:						
1	The fundamental design, structures.	analysis, and implementation of basic data				
2	Basic concepts in the spe	ecification and analysis of programs.				
3	Principles for good prog	gram design, especially the uses of data abstraction.				
4	Significance of algorithm	ns in the computer field				
Pre-Requisite:						
1.	Proficiency in one high	n level programming language				
Course Outcome:	1					
1.	On completion of this c various data structures,	ourse students are expected to learn their usages, merits and limitations.				
2.	On completion of this c analyze various algorith	ourse students are expected to design and ms.				
3.	On completion of this c comparative analysis an the appropriate data stru	ourse students are expected to do a nong different data structures and decide on acture to be used in a given scenario.				
4.	On completion of this c adequate knowledge and	ourse students are expected to acquire d skills to solve a real lifesoftware problem.

CO4	2	2	3	2	2	-	-	-	-	-	-	2	3	2	2

Module	Торіс	Sub-topics
number		
1	Algorithm	Algorithm concept, Time Complexity, Space Complexity,
	Concept	Running Time– Worst Case, Best Case, Average Case, time
		space trade-off, Algorithm Efficiency-Linear loops, Logarithmic
		loops, Nested loops, Time complexity comparison- Polynomial
		vs Exponential, Algorithm Notations-Big O, Big Omega, Theta
		Notation
2	Introduction to	Program Efficiency, Data Structure-definition, usage, examples,
	Data Structure,	Selection of Appropriate Data Structure, Data Structure-some
	Array	terminologies, Classification of Data Structure, Fundamental
		difference between Linear and Non-linear Data Structure with
		examples, Operations on Linear Data Structure
		Introduction to Linear Data Structure-Array, 1D, 2D arrays,
		Row/Column major representation, sparse matrix
3	Linear Data	Linked List-Introduction, Representation, Memory Allocation,
	Structure-Linked	Types- Singly, circular, doubly, doubly & circular, Operations
	List	on various linked lists-Count, Traverse/Display, Search, Insert,
		Delete
4	Linear Data	Introduction, Stack Operations – Push, Pop, Peek,
	Structure-Stack	Representation of Stack (Array, Linked List), Application of
		Stack: Reversing a list, Parentheses checker, Conversion of an
		infix expression into a postfix expression, Evaluation of a
		postfix expression, Conversion of an infix expression into a
		prefix
		Expression, Evaluation of a prefix expression, Recursion,
		Tower of Hanoi
5	Linear Data	Introduction, Queue Operations – Enqueue, Dequeue, Peep,
	Structure-Queue	Representation of Queue (Array, Linked List), Types of
		Queues- Circular Queue, Deque, Priority Queue, Multiple
		Queue; Various operations (Enqueue, Dequeue, Peep) on the
		above mentioned queues-Both iterative & recursive
		implementation; Application of Queue
6	Searching &	Searching- Types of Searching (Linear Search, Binary Search,
	Sorting	Interpolation Search), Comparison among various Searching
		techniques
		Sorting-Types, Methods (Bubble Sort, Insertion Sort, Selection
		Sort, Quick Sort, Merge Sort), Technique, Explanation,
		Algorithm and Examples on various sorting methods,
		Comparison of various sorting algorithms in terms of time
		complexity (Average case, Worst case)

Module	Торіс	Suggested Assignments
Number	_	-
2	Control structures	<ol> <li>Write a C program to find sum and average of three numbers.</li> <li>Write a C program to find the sum of individual digits of a given positive integer.</li> <li>Write a C program to generate the first n terms of the</li> </ol>
		<ol> <li>Write a C program to generate the first in terms of the Fibonacci sequence. metrices from the console, verifies if metrics multiplication is possible or not. Then multiplies the metrices and prints the 3rd metrics.</li> <li>Write a C program to generate prime numbers between 1 to n.</li> <li>Write a C program to Check whether given number is Armstrong Number or Not.</li> </ol>
		<ul> <li>6. Write a C program to evaluate the algebraic expression (ax+b)/(ax-b).</li> <li>7. Write a C program to check if the given number is perfect number?</li> </ul>
		<ol> <li>8. Write a C program to check if given number is strong number?</li> <li>9. Write a program to print your name without using any semicolon in the program.</li> <li>10. Write a program to convert temperature in Celsius to program.</li> </ol>
		<ul> <li>10. Write a program to convert temperature in Censius to Fahrenheit and vice-versa.</li> <li>11. Write a C program to check whether a number is Palindrome or not.</li> <li>12. Write a C program to find maximum between two</li> </ul>
		<ul> <li>12. Write a C program to find maximum between two numbers.</li> <li>13. Write a C program to find maximum between three numbers.</li> <li>14. Write a C program to check whether a number is</li> </ul>
		<ul> <li>negative, positive or zero.</li> <li>15. Write a C program to check whether a number is divisible by 5 and 11 or not within the range 100 to 500.</li> </ul>
		<ul> <li>16. Write a C program to check whether a number is even or odd.</li> <li>17. Write a C program to check whether a year is a leap</li> </ul>
		<ul><li>17. Write a C program to check whether a year is a leap year or not.</li><li>18. Write a C program to check whether a character is alphabet or not.</li></ul>
		<ul><li>19. Write a C program to input any alphabet and check whether it is vowel or consonant.</li><li>20. Write a C program to input any character and check whether it is an alphabet digit or special character.</li></ul>
3	Arrays and structure	<ol> <li>Write a program to store marks for n number of student in an array and print their marks.</li> <li>Write a program which stores the marks of subject Mathematics and English of n number of students in an array and then prints their individual total marks.</li> <li>Write a program to insert an element in an array in a particular position.</li> <li>Write a program to delete an element from a particular</li> </ol>
		position of an array.

		1	
		5.	Write a program to convert a decimal number taken as
			input from user to corresponding binary number and
			store the result in an array.
		6.	Write a program to input a binary number in an array
			and convert into corresponding decimal number.
		7	Write a program to find the smallest and the largest
		/.	aloments in an array
		0	Weite a magnetic for deleting dealing to allow out in an
		8.	write a program for deleting duplicate elements in an
		_	array.
		9.	Write a program to search for a particular element in
			an array.
		10.	Write a program to sort n elements (ascending order).
		11.	Write a program to find second highest number from
			the array without using sorting.
		12	Write a program to perform addition and subtraction
		12.	hetween two matrices
		12	White a program to transpose a matrix
		13.	Write a program to add the abuvents of each were and
		14.	write a program to add the elements of each row and
			each column of a matrix.
		15.	Write a program to perform the multiplication of two
			matrices.
		16.	Write a program to check whether a matrix is identity
			matrix or not.
		17.	Write a program to check whether a matrix is sparse
			matrix or not
		18	Write a C program to create a structure named
		10.	company which has name, address, phone and no Of
			Company which has hame, address, phone and no Of
			Employee as member variables. Read name of
			company, its address, phone and no Of Employee.
			Finally display these members" value.
		19.	Define a structure "complex" (typedef) to read two
			complex numbers and perform addition, subtraction of
			these two complex numbers and display the result.
		20.	Write a C program to read Roll No. Name, Address.
			and Age marks of 12 students in the BCT class and
			display the details from the function
4	<b>F</b>	1	Write a Conserver to add architector.
4	runctions	1.	write a C program to add, subtract, multiply and
			divide two integers using a user-defined type function
			with return type.
		2.	Write a C program to calculate sum of first 20 natural
			numbers using recursive function.
		3.	Write a C program to generate Fibonacci series using
			recursive function.
		4.	Write a C program to swap two integers using call by
			value and call by reference methods of passing
			arguments to a function
		5	Write a Concorrent to find sum of digits of the number
		5.	while a C program to find sum of digits of the number
		-	using kecursive function.
		6.	Write a C program to read an integer number and print
			the reverse of that number using recursion.
		7.	Write a C program to find maximum and minimum
			between two numbers using functions.
		8.	Write a C program to check whether a number is even
			or odd using functions.
		9	Write a C program to check whether a number is
		1.	The a C program to check whether a humber is

		prime, Armstrong or perfect number using functions.								
		10. Write a C program to find power of any number using								
		recursion.								
5	Pointers	1. Write a C program to find the sum of all the								
		elements of an array using pointers.								
		2. Write a C program to swap value of two variables using								
		pointer.								
		3. Write a C program to add two numbers using pointers.								
		4. Write a C program to input and print array elements using								
		<ol> <li>Write a C program to input and print array elements us pointer.</li> <li>Write a C program to copy one array to another using pointer.</li> <li>Write a C program to swap two arrays using pointers.</li> <li>Write a C program to reverse an array using pointers.</li> <li>Write a C program to search for an element in array us pointers.</li> </ol>								
		<ol> <li>Write a C program to add two numbers using pointers.</li> <li>Write a C program to input and print array elements us pointer.</li> <li>Write a C program to copy one array to another using pointer.</li> <li>Write a C program to swap two arrays using pointers.</li> <li>Write a C program to reverse an array using pointers.</li> <li>Write a C program to search for an element in array us pointers.</li> <li>Write a C program to add two 2 X 2 matrix using pointers.</li> <li>Write a C program to multiply two 2 X 2 matrix using pointers.</li> </ol>								
		pointer.								
		6. Write a C program to swap two arrays using pointers.								
		7. Write a C program to reverse an array using pointers.								
		8. Write a C program to search for an element in array using								
		pointers.								
		<ul> <li>9. Write a C program to add two 2 X 2 matrix using pointer</li> <li>10. Write a C program to add two 2 X 2 matrix using pointer</li> </ul>								
		<ul> <li>o. Write a C program to scalen for an element in array usin pointers.</li> <li>9. Write a C program to add two 2 X 2 matrix using pointer 10. Write a C program to multiply two 2 X 2 matrix using pointers.</li> <li>11. Write a C program to find length of string using pointers</li> </ul>								
		pointers.								
		<ol> <li>Write a C program to reverse an array using pointers.</li> <li>Write a C program to search for an element in array usi pointers.</li> <li>Write a C program to add two 2 X 2 matrix using pointer</li> <li>Write a C program to multiply two 2 X 2 matrix using pointers.</li> <li>Write a C program to find length of string using pointer</li> <li>Write a C program to copy one string to another using pointer.</li> <li>Write a C program to concatenate two strings using pointers.</li> </ol>								
		<ol> <li>Write a C program to swap value of two variables using pointer.</li> <li>Write a C program to add two numbers using pointers.</li> <li>Write a C program to input and print array elements using pointer.</li> <li>Write a C program to copy one array to another using pointer.</li> <li>Write a C program to swap two arrays using pointers.</li> <li>Write a C program to reverse an array using pointers.</li> <li>Write a C program to search for an element in array using pointers.</li> <li>Write a C program to add two 2 X 2 matrix using pointers.</li> <li>Write a C program to find length of string using pointer 10. 		pointer.								
		13. Write a C program to concatenate two strings using								
		pointers.								
		14. Write a C program to compare two strings using pointers.								
		15. Write a C program to find a substring from a given string								
(	File have differen	using pointers.								
0	Flie nandling	1. Write a C Program to list all files and sub-directories in a								
		Unectory.								
		2. Write a C Program to could number of lines in a file.								
		5. White a C Program to print contents of the file to another								
		4. write a C Frogram to copy contents of one me to another								
		5 Write a C Drogrom to marge contents of two files into a								
		5. write a C Frogram to merge contents of two mes into a third file								
		Unite file.								
		10. while a C program to delete a me.								

#### **Course Code: MCA104**

#### **Lecture Hours: 40**

Name of the Course:	Discrete Mathematical	Structure				
Course Code: MCA1	104	Semester: 1st				
Duration: 40 Hrs.		Maximum Marks: 100				
<b>Teaching Scheme</b>		Examination Scheme				
Theory: 3		End Semester Exam: 100				
Tutorial: 1		Continuous Assessment: 100				
Credit: 3						
Aim:						
Sl. No.						
1	To provide a strong foun for computing application	dation in discrete mathematical structures essential ons.				
2	To develop analytical an computer science.	d logical reasoning skills for problem-solving in				
3	To enable students to apgraph theory, and autom	ply mathematical concepts in areas like algorithms, ata theory.				
Objective:						
Sl. No.						
1	To understand and apply functions in computing.	fundamental concepts of set theory, relations, and				
2	To develop proficiency i relations for algorithm d	n mathematical logic, combinatorics, and recurrence esign.				
3	To explore graph theory optimization algorithms	and its applications in networks, trees, and				
4	To introduce automata th computation models.	neory, grammars, and fuzzy logic for theoretical				
Pre-Requisite:						
Sl. No.						
1.	Basic knowledge of m	athematics, including algebra and logic.				
Course Outcome:	T					
1.	Apply set theory, relations computing problems.	s, and functions to model real-world				
2.	Analyze and solve problem techniques, and recurrence	ms using mathematical logic, combinatorial e relations.				
3.	Utilize graph theory conce and network-related probl	epts and algorithms for solving computational ems.				
4.	Design and analyze finite for computational applica	automata, grammars, and fuzzy logic systems tions.

Aim:	-							
Sl. No.								
1	Making the students indu	ustry-ready.						
2	Making the students rele	vant in the contemporary society.						
3	Making the students prep listening, speaking, read	pared to analyze and solve problems through ing and writing skills.						
Objective:								
Sl. No.								
1	To develop effective bus	iness writing and communication skills.						
2	To enhance oral commun	nication and presentation abilities among students.						
3	To help students learn to reports.	p prepare various business documents and technical						
4	To improve listening and	l reading comprehension.						
Pre-Requisite:								
Sl. No.								
1.	Basic English Proficie Writing Skills, Acader Corporate Ethics.	ncy, Listening and Speaking Skills, Reading and nic and Social Contexts, and Familiarity with						
Course Outcome:	1							
1.	Achieve competence in gr fundamentals.	ammar, syntax, and vocabulary						
2.	Effectively communicate	in academic and social contexts.						
3.	Develop readiness for the	e industry and understand corporate ethics.						
4.	Acquire basic proficiency comprehension, writing, a	y in English encompassing reading, listening, and speaking skills.

Module	Торіс	Sub-topics
number		
1	Introduction to	- Importance of effective communication in business.
	Business	- Types of business communication: Internal and External.
	Communication.	- Communication process and barriers.
		- Strategies for effective communication.
		- Traditional and digital communication channels.
		- Effective use of email, memos, and business letters.
		- Communication through social media and professional
		networks.
2	Writing Skills	- Formats and styles of business letters.
	Development	- Writing formal and informal business letters.
	_	- Common types of business letters: Inquiry, Complaint,
		Application, and Appreciation.
		- Structure of technical reports.
		- Writing abstracts, executive summaries, and conclusions.
		- Incorporating visuals and data in reports.
3	Oral	- Preparing and delivering business presentations.
	Communication	- Using multimedia in presentations.
	Skills	- Techniques for effective public speaking.
		- Prepared speech exercises.
		- Extempore speech practice.
		- Role-playing business scenarios.
4	Listening and	- Importance of active listening in business.
	Reading Skills	- Techniques for improving listening skills.
		- Listening comprehension exercises.
		- Developing reading comprehension.
		- Strategies for effective reading.
		- Comprehension tests and exercises.
5	Practical	- Principles of organizing written material.
	Communication	- Structuring content for clarity and impact.
	Applications	- Editing and proofreading techniques
		- Designing effective posters for business presentations.
		- Visual and textual balance.
		- Presenting posters in professional settings.
6	Practical	- Interactive sessions on negotiation and persuasion.
	Communication	- Group discussions and teamwork exercises

number		
1	Verbal	1) Introduction of Parts of speech: Introduction, Brief
	English-1:	discussion of Parts of speech
		2) What are nouns, Kinds of Nouns, Rules & Applications.
		3) Definition of Pronoun, Examples, Rules & Application
		4) Definition of Subject Verb Agreement, Rules and
		Examples.
		5) Basic Application of Vocabulary (Synonyms and
		Antonyms)
		6) Reading Comprehension.
		7) Official Letter Writing
		Parts of Speech
		1. Identify Parts of Speech:
		• Provide a paragraph andask students to identify
		and label each word's partof speech (noun, verb,
		adjective, adverb,
		pronoun preposition conjunction interjection)
		2 Parts of Sneech Matching
		2. Tarts of Speech Matching.
		A share dente de match and a list of parts of speceli.
		Ask students to matcheach word to the correct
		part of speech.
		3. Parts of Speech Sentences:
		Ask students to write sentences using specific
		parts of speech (e.g., writea sentence with at least
		one noun, one verb, one adjective, and one
		adverb).
		Nouns
		1 Noun Identification
		• Provide a list of sentences and ask students to
		o Provide a list of sentences and ask students to
		underline or nignight the hours.
		2. Types of Nouns:
		• Provide examples of common, proper, abstract,
		and collective nouns. Ask students to classify
		given nouns into these categories.
		3. Noun Plurals:
		• Give a list of singular nouns and ask students to
		write their plural forms.
		Pronouns
---	-----------------------	--
		1. Pronoun Replacement:
		• Provide sentences with nouns and ask students to
		replace the nouns withappropriate pronouns.
		2. Pronoun Agreement:
		• Create sentences withpronouns and ask
		studentsto correct any errors inpronoun-
		antecedent agreement
		2 Trance of <b>D</b> arameters
		3. Types of Pronouns:
		Provide a list of pronouns and ask students to
		classify them intocategories (personal, possessive,
		reflexive, demonstrative, interrogative, relative,
		indefinite).
		Synonyms
		1. Synonym Matching:
		• Provide a list of words and a list of synonyms. Ask
		students to match each word with its synonym
		2 Synonym Sontongos:
		2. Synonym Sentences.
		• Give sentences with underfined words and ask
		students to rewrite thesentences using synonyms
		for the underlined words.
		3. Synonym Stories:
		• Ask students to write a short story using a list of
		provided words and their synonyms.
		Antonyms
		1. Antonym Matching:
		• Provide a list of words and a list of antonyms. Ask
		students to match each word with its antonym.
		2 Antonym Sentences:
		2. Give sentences with underlined words and ask
		students to rewrite thesenteness using entenums
		for the order line described
		for the underlined words.
		3. Antonym Pairs:
		Ask students to create a list of ten words and writetheir antonyms
2	Data	Coloulating Totals and Avarages:
	Data Intormatation	Provide a table with sales data over several months. Ask
	Interpretation	students to calculate the total sales and average sales for
	level-1	each month
		Comparing Data:
		Provide a table with data on two or more products or
		categories. Ask students to compare the data and determine
		which product/category performed better based on different
		criteria (e.g., sales, growth rate).

# Syllabus for MCA Admission Batch 2022, 2<sup>nd</sup> Semester

## Course Name: Database Management Systems

### Credit: 4

### **Course Code: MCA201**

### **Lecture Hours: 40**

Name of the Course:	Name of the Course: Database Management Systems							
Course Code: MCA2	01	Semester: 2nd						
Duration: 40 Hrs.		Maximum Marks: 100						
Teaching Scheme		Examination Scheme						
Theory: 3		End Semester Exam: 70						
Tutorial: 1		Continuous Assessment: 30						
Credit: 4								
Aim:	1							
1.	To gain Knowledge of te	echnology used to manage data from a database						
2.	To enhance Ability to id knowledge and Knowled	entify Data into information, Information into lge to the action						
3.	To gain Understanding of	of ORACLE software						
Objective:	-							
1.	This course introduces the design and implementati	ne core principles and techniques required in the on of database systems.						
2.	This course focus on rela database design theory: 1 languages, database secu	ational database management systems, including E-R modeling, data definition and manipulation wity and administration.						
3.	It covers essential DBM Concurrency Control an	S concepts such as: Transaction Processing, d Recovery						
4.	It provides students with of databases and databases applications.	theoretical knowledge and practical skills in the use e management systems in information technology						
Pre-Requisite:								
1.	Concepts of computer pr concepts).	ogramming (like programming in CFiles						
Course Outcome:	Γ							
1.	Understand the basic concepts and the applications of database systems.							
2.	Master the basics of SQ	L and construct queries using SQL.						
3.	Understand the relationa	l database design principles.						
4.	Familiar with the basic i concurrency control.	ssues of transaction processing and

#### Annexure – I (SQL based Lab – Assignments)

Assignment – 1:

Consider the following relational schema for the Office of the Controller of Examinations Application. Student (Rollno, Name, Dob, Gender, Doa, Bcode); Implement a check constraint for Gender Date of Admission Branch (Bcode, Bname, Dno); Department (Dno, Dname); Course (Ccode, Cname, Credits, Dno); Branch\_Course (Bcode, Ccode, Semester); Enrolls (Rollno, Ccode, Sess, Grade); For Example,

SESS can take values 'APRIL 2013', 'NOV 2013'

Implement a check constraint for grade Value Set ('S', 'A', 'B', 'C', 'D', 'E', 'U' );

Students are admitted to Branches and they are offered by Departments. A branch is offered by only one department.

Each branch has a set of Courses (Subjects). Each student must enroll during a semester. Courses are offered by Departments. A course is offered only by one department. If a student is unsuccessful in a course he/she must enroll for the course during next session. A student has successfully completed a course if the grade obtained by is from the list (A, B, C, D, and E). A student is unsuccessful if he/she have grade 'U' in a course. Primary Keys are underlined. Questions

These are questions for assignment 1

Question (A): Develop a SQL query to list details of Departments that offer more than 3 branches.

Question (B): Develop a SQL query to list the details of Departments that offer more than 6 courses.

Question (C): Develop a SQL query to list the details of courses that are common for more than 3 branches.

Question (D): Develop a SQL query to list students who got 'S' in more than 2 courses during single enrollment.

Question (E): Create a view that will keep track of the roll number, name and number of courses, a student has completed successfully.

#### Assignment – 2:

Consider the following relations for an Order Processing Database application in a Company. Customer (Customerno varchar2 (5), Cname varchar2 (50)); Implement check constraints to check Customerno starts with 'C'.

Cust\_Order (Orderno varchar2(5), Odate Date, Customerno references Customer, Ord\_amt number(8)); Implement check constraints to check Orderno starts with 'O'.

Ord\_amt is derived attribute (default value is 0);

Item (Itemno varchar2 (5), Item\_name varchar2 (30), unit\_price number (5)); Implement check constraint to check Itemno starts with 'I'.

Order\_item (Orderno references Cust\_order, Itemno references item, qty number (3)); Primary Key is underlined. Questions

These are questions for assignment 2. The solution is available after the last question. Question (A): Develop DDL to implement above schema enforcing primary key, check constraints and foreign key constraints.

Question (B): Populate Database with rich data set.

Question (C): Develop SQL query to list the details of customers who have placed more than 3 orders.

Question (D): Develop a SQL query to list details of items whose price is less than the average price of all items in each order.

Question (E): Develop a SQL query to list the orderno and number of items in each order. Question (F): Develop a SQL query to list the details of items that are present in 25% of the orders.

Question (G): Develop an update statement to update the value of Ord\_amt.

Question (H): Create a view that keeps track of detail of each customer and number of Order placed.

#### Assignment – 3:

Q3: Consider the following relational schema

Staff (Staffno number (5), Name varchar2 (30), Dob Date, Gender Char (2), Doj Date, Designation varchar2 (30), Basic\_pay number (6), Deptno varchar2 (5));

Gender must take value 'M' or 'F'.

Dept (Deptno varchar2 (5), Name varchar2 (30));

Skill (Skill\_code varchar2 (5), Description varchar2 (30), Charge\_Outrage number (3)); Staff\_skill (Staffno number (5), Skill\_code varchar2 (5));

Project (Projectno varchar2 (5), Pname varchar2 (5), Start\_Date Date, End\_Date Date,

Project\_Manager\_Staffno number (5)); Project Number must start with 'P'.

Works (Staffno number (5), Projectno varchar2 (5), Date\_Worked\_On Date, Intime Timestamp, Outtime Timestamp);

Primary Key is underlined. Questions

These are questions for assignment 3. The solution is available after the last question.

Question (A): Develop DDL to implement the above schema specifying appropriate data types for each attributes and enforcing primary key, check constraints and foreign key constraints. Question (B): Populate the database with rich data set.

Question (C): Develop a SQL query to list the departmentno and number of staff in each department,

Question (D): Develop a SQL query to list the details of staff who earn the AVG basic pay of all staff.

Question (E): Develop a SQL query to list the details of staff who have more than 3 skills. Question (F): Develop a SQL query to list the details of staff who have skills with a charge outrate greater than 60 per hour.

Question (G): Create a view that will keep track of the department number, department name, the number of employees in the department and total basic pay expenditure for the department. Question (H): Develop a SQL query to list the details of Depts which has more than 5 staff working in it.

Question (I): Develop a SQL query to list the details of staff who have more than 3 skills.

#### Assignment – 4:

Consider the following relational schema for a banking database application. Customer (Cid, Cname);

Branch (Bcode, Bname);

Account (Ano, Atype, Balance, Cid, Bcode);

An account can be a saving account or a current account. Check Atype in 'S' or 'C'. A customer can have both types of accounts. Transaction (Tid, Ano, Tttype, Tdate, Tamount); Ttype can be 'D' or 'W'.

D - Deposit, W - Withdrawal Primary Key is underlined. Questions

These are questions for assignment 4. The solution is available after the last question.

Question (A): Develop DDL to implement the above schema specifying an appropriate data type for each attribute enforcing primary key, check constraints and foreign key constraints. Question (B): Populate the database with a rich data set.

Question (C): Develop a SQL query to list the details of customers who have a saving account and a current account.

Question (D): Develop a SQL query to list the details of branches and the number of accounts in each branch.

Question (E): Develop a SQL query to list the details of branches where the number of accounts is less than the average number of accounts in all branches.

Question (F): Develop a SQL query to list the details of customers who have performed three transaction on a day.

Question (G): Create a view that will keep track of branch details and the number of accounts in each branch.

#### Assignment – 5 :

Let us consider the following database schema. As you can see in below figure, there are four tables (Existing Database)

- Projects, Employees, ProjectEmployees, and JobOrders. Recently, the Customers table has also been added to the database to store the customers' information. As you can see in the

	Projects		
N	8 ID		Existing Database
63	Name		
	Value		
	StartDate		
	EndDate		
		C 1000	Customers
	L	<b>4 4</b>	Name
			Industry
JobOrders			Project1_ID
8 ID	0	J	project1_feedback
EmployeeID		8	project2_id
ProjectID		ProjectEmployees	project2_feedback
Description		§ ID	contact_person_id
OrderDateTi	me	ProjectID	contact_person_and_role
Quantity		EmployeeID	phone_number
Price		Hours	address
	^	8	city
	¥	Î	zip
	¥.	<u> </u>	
	Employees		
	TimtNama		
	Firstivame		
	Lastivame		
	HouriyWage		A THE OWNER OF THE OWNER
	HireDate		New Table Added

diagram below, the Customers table has not been designed in a proper way to support the normal forms, let's go ahead and fix it.

The Customers table in the diagram violates all the three rules of the first normal form. We do not see any Primary Key in the table.

The data is not found in its most reduced form. For example, the column ContactPersonAndRole can be divided further into two individual columns - ContactPerson and ContactPersonRole.

Also, we can see there are two repeating groups of columns in this table - (Project1\_ID, Project1\_FeedBack) and (Project2\_ID, Project2\_Feedback). We need to get these removed from this table.

Name	Industry	Project1_ID	Project1_Feedback	Project2_ID	Project2_Feedback	ContactPersonID	ContactPersonAndRole	PhoneNumber	Address	City	Zip
Zydus Cadilla	Pharma	2455	Amazing Work!			133	Dave, HoD	555-55-5555	1, Landing Street	York	23456
HDFC	Finance	9855	Nice job!	4924	Fantastic!	146	Mark, Ops Lead	222-22-2222	2, Times Square	London	86421
ICICI	Finance	3965	Well done.			122	Peter, Analyst	444-44-4444	3, Garden Street	Brussels	53864

The diagram below shows dummy data stored in the Customers table.

- a. Add a primary key to this table. For this, add a new column *ID* with datatype as *INT* and also assign it as an *Identity* column.
- b. split the column ContactPersonAndRole into two individual columns. This can be done in two steps as follows:
  - i. Rename the original column from ContactPersonAndRole to ContactPerson.
  - ii. Add a new column for ContactPersonRole.
- c. Finally, in order to satisfy the third rule of the First Normal Form, move the columns *Project1\_ID*, *Project1\_Feedback*, *Project2\_ID*, and *Project2\_Feedback* into a new table. This can be done by creating a new table *ProjectFeedbacks* and link it back with the *Customers* and the *Projects* table which remove the above-mentioned columns from the *Customers* table and create a new table *ProjectFeedbacks* with Foreign Key references to the *Customers* and *Projects* table.

The database schema after applying all the rules of the first normal form should be as below.

Pro	piects			ProjectFeedback
8	ID			
	Name			ProjectID
	Value			CustomerID
	StartDate			Feedback
	EndDate			recuback
			L L	0
L	<u> </u>			
	ŤŤ			
lobOrders				
				Customers
EmployeeID		8		Name
ProjectID	ProjectEmploy	ees		Industry
Description	R ID			ContactPersonID
Description	ProjectID			ContactPerson
OrderDateTime	EmployeeID			PhoneNumber
Quantity	Hours			Address
Price				City
0	8			Zip
Ŷ	Ĩ			ID ID
				ContactPersonRole
¥	¥			
Employee	s			
ID ID				
FirstNam	ne la			
LastNam	e			<b>_</b>
HourlyW	/age			-
HireDate				Altered Objects

If you see the database schema diagram above, you can see that the *ContactPerson*, *ContactPersonRole* and the *PhoneNumber* do not directly relate to the *ID* of the *Customers* table. That is because the primary key refers to a customer and not to any person or role or the phone number of the contact person.

- 1. Remove all these columns from the *Customers* table which do not relate to the primary key of the table directly.
- 2. Once, the columns are removed from the *Customers* table, now create a new table that'll store the data for the contact persons. Let us create a new table *ContactPersons* and relate it to the *Customers* table with a foreign key relation

#### Assignment – 6:

Implement B+ tree using any Programming Language.

#### List of Minor Projects Based on SQL

- 1. Blood Donation Management System
- 2. Cooking Recipe Website
- 3. Library Database Management System
- 4. Online Retail Database Software
- 5. Inventory Management System
- 6. Voice Commands Transport Enquiry System
- 7. Carbon-Emission Calculator
- 8. Railway Control System Database
- 9. Student Database Management
- 10. Hospital Management System
- 11. Payroll Management System
- 12. Grocery Store Sales

Course Name: Object-Oriented Programming

### **Course Code: MCA202**

### Lecture Hours: 40

Name of the Course:	<b>Object-Oriented Program</b>	mming				
Course Code: MCA2	02	Semester: 2nd				
Duration: 40 Hrs.		Maximum Marks: 100				
Teaching Scheme		Examination Scheme				
Theory: 3		End Semester Exam: 70				
Tutorial: 1		Continuous Assessment: 30				
Credit: 4						
Aim:						
1.	To gain the knowledge of	f basic object-oriented programming techniques.				
2.	Learning the underlying	concepts of Java Programming.				
3.	Get industry ready with	the coding skills.				
Objective:						
1.	To understand the basic object-oriented language	concepts and fundamentals of platform independent				
2.	To demonstrate skills in techniques and multithre	writing programs using exception handling ading.				
3.	To understand streams a	nd efficient user interface design techniques.				
4.	To understand the basic object-oriented language	concepts and fundamentals of platform independent				
Pre-Requisite:						
1.	Basics of programming 1	anguage.				
2.	Logic building skills.					
Course Outcome:						
1.	Students should have an types, operators, conditi Java.	idea of how to work with different data onal statements and iterative statements in				
2.	Students should have an different collection inter	idea of how to work with strings, arrays, and faces.				
3.	Students should be able to use and design programs using their advanced data structures, I-O Streams, AWT, and GUI Programming using Applets and Swings.					
4.	Students will learn to we constructs in Java and m	ork with object-oriented programming nake small projects based on them.

#### Annexure – I (Programming Based Lab – Assignments)

Assignment – 1: Basic Programming and Command Line Arguments

- 1. Write a Java Program to print your Name entered through the command line as an argument.
- 2. Write a Java program to convert Temperature from Fahrenheit to Celsius and vice versa.
- 3. Write a Java program to add two numbers.
- 4. Write a Java Program to find the area and Perimeter of a rectangle.
- 5. Write a program in Java to find the maximum of three numbers.
- 6. Write a Java Program to check whether a given year is a leap year.
- 7. Create four different classes with three of them containing the function main.Save the file with a different name than that of the class name and run each of the classes with the main function.
- 8. Write a Java program to reverse a number entered as a command line argument.
- 9. Write a Java program to count the number of digits entered through the command line argument.
- 10. Write a Java program to find all the multiples of 3 within a given range where the starting and ending values are entered through a command line argument.

#### Assignment – 2: Constructors & Inheritance

- 1. Write a class, Grader, which has an instance variable, score, an appropriate constructor and appropriate methods. A method, lettergrade (), that returns the letter grade as O/E/A/B/C/F. Now write a demo class to test the Grader class by reading a score from the user, using it to create a Grader object after validating that the value is not negative and is not greater than 100. Finally, call the letterGrade() method to get and print the grade.
- 2. Write a class, Commission, which has an instance variable, sales; an appropriate constructor; and a method, commission() that returns the commission. Now write a demo class to test the Commissionclass by reading a sale from the user, using it to create aCommission object after validating that the value is not negative. Finally, call the commission() method to get and print the commission. If the sales are negative, your demo should print themessage "Invalid Input".
- 3. For a Mobile Shop project, create a "Telephone" class with details like mobile\_id, model\_name and available\_quantity in "Phone" package. Inherit from this class and create a class for "smart\_phone" with necessary information like enabled\_5G, foldable anddual\_screen in package "Smart". The customer executive tries to display all smart\_phone details (mobile\_id, model\_name, available\_quantity, enabled\_5G, foldable and dual\_screen) and updates the quantity information, whenever the customer purchases the smart\_phone. Write the necessary java programs to implement this scenario and test with user inputs.
- 4. An educational institution maintains a database of its employees. The database is divided into a number of classes whose hierarchical relationships are shown below. Write all the classes and define the methods to create the database and retrieve individual information as and when needed. Write a driver program to test the classes. Stab (code, name), Teacher (subject, publication) is a Staff, Officer (grade) is a Staff, Typist (speed) is a Staff RegularTypist (remuneration) is a Typist, and CasualTypist (daily wages) is a Typist.

#### Assignment – 3: Flow Control

- The process of finding the largest value (i.e., the maximum of a group of values) is used frequently in computer applications. For example, a program that determines the winner of a sales contest would input the number of units sold by each salesperson. The salesperson who sells the most units wins the contest. Build a Java application that inputs a series of 10 integers and determines and prints the largest integer. Your program should use at least the following three variables:
  - a. counter: A counter to count to 10 (i.e. to keep track of how many numbers have been input and to determine when all 10 numbers have been processed).
  - b. number: The inter most recently input by the user.
  - c. largest: The largest number found so far.

Note: Every time the sales figure of one employee is entered, the application should ask the user if they want to enter any more sales figures of a salesperson!

- 2. Write an application that prompts the user to enter the size of the side of a square, and then displays a hollow square of that size made of asterisks. Your program should work for squares of all side lengths between 1 and 20.
- 3. Write a program to compute the following formula.  $e= 1/0!+ 1/1! + \frac{1}{2}! + \frac{1}{3}! + \dots + 1/n!$
- 4. Using an enhanced for (for-each) loop, copy the content of one 3-dimensional array to another 3-dimensional array and display its contents.
- 5. Create the following vase pattern using a loop:

#### Assignment – 4: Inheritance and Dynamic Polymorphism

- 1. Create a general class ThreeDObject and derive the classes Box, Cube, Cylinder and Cone from it. The class ThreeDObject has methods wholeSurfaceArea() and volume(). Override these two methods in each of the derived classes to calculate the volume and whole surface area of each type of three-dimensional object. The dimensions of the objects are to be taken from the users and passed through the respective constructors of each derived class. Write a main method to test these classes.
- 2. Create a base class Building that stores the number of floors of a building, the number of rooms and its total footage. Create a derived class House that inherits the Building and also stores the number of bedrooms and bathrooms. Demonstrate the working of the classes.
- 3. In the earlier program, create a second derived class Office that inherits the Building and stores the number of telephones and tables. Now demonstrate the working of all three classes.
- 4. Create a base class Distance which stores the distance between two locations in miles and a method travelTime(). The method prints the time taken to cover the distance when the speed is 60 miles per hour. Now in a derived class DistanceMKS, override travelTime() so that it prints the time assuming the distance is in kilometres and the speed is 100 km per second. Demonstrate the working of the classes.
- 5. Create a base class called "vehicle" that stores the number of wheels and speed. Create the following derived classes –"car" that inherits "vehicle" and also stores the number of passengers.

"truck" that inherits "vehicle" and also stores the load limit.

Write a main function to create objects of these two derived classes and display all the information about "car" and "truck". Also, compare the speed of these two vehicles - car and truck and display which one is faster.

#### Assignment – 5: Abstract class & Interface in Java.

- 1. Design an abstract class having two methods. Create Rectangle and Triangle classes by inheriting the shape class and override the above methods to suitably implement for Rectangle and Triangle class.
- 2. Write a program to create a class named Vehicle having protected instance variables regnNumber, speed, colour, ownerName and a method showData() to show "This is a vehicle class". Inherit the Vehicle class into subclasses named Bus and Car having individual private instance variables route Number in Bus and manufacturer Name in Car and both of them having showData() method showing all details of Bus and Car respectively with the content of the super class's showData() method.
- 3. Create an interface Department containing attributes deptName and deptHead. It also has abstract methods for printing the attributes. Create a class hostel containing hostelName, hostelLocation and numberofRooms. The class contains methods for getting and printing the

attributes. Then write a Student class extending the Hostel class and implementing the Department interface. This class contains attributes studentName, regdNo, electiveSubject andavgMarks. Write suitable getData and printData methods for this class. Also, implement the abstract methods of the department interface. Write a driver class to test the Student class. The program will be menu driven containing the options:

- i) Admit new student
- ii) Migrate a student
- iii) Display details of a student

For the third option, a search is to be made on the basis of the entered registration number.4. Create an abstract class Accounts with the following details:

- Data Members:
  - (a) Balance
  - (b) accountNumber
  - (c) accountHoldersName
  - (d) address

Methods:

(a) withdrawl()- abstract

- (b) deposit()- abstract
- (c) display() to show the balance of the account number

Create a subclass of this class SavingsAccount and add the following details:

Data Members:

```
(a) rateOfInterest
```

Methods:

(a) calculateAount()

5. Implement the below Diagram.

Here, Asset class is an abstract class containing an abstract methoddisplayDetails() method. Stock, bond and Savings class inherit the Asset class and displayDetails() method is defined in every class.

Assignment – 6: Threads, Multithreading & Thread Synchronization

- 1. Write a Java program in which a total of 4 threads should run. Set different priorities for the thread.
- 2. Write a Java Program to Create a Thread that Implements the Runnable Interface.
- 3. Write a Java Program to Check the Priority Level of a Thread.

- 4. Write a Java Program Defining Thread by Extending the Thread class.
- 5. Write a Java Program to Get the Name of a Running Thread.
- 6. Write a Java Program to Stop a Thread.
- 7. Write a Java Program to Check Whether Define a Thread Class Without Defining run() Method in the Class.
- 8. Write a Java Program to Show that Method Will be Verified Whether it is Synchronized or Not.
- 9. Create 4 threads with priority 1,3,5,7 respectively. Update a counter in each of the threads for 10 ms. Print the final value of the count for each thread.
- 10. Write a Java Program to Use Method Level Synchronization.

#### Assignment – 7: Exception Handling& Collections

- 1. Write a Java program using try and catch to generate Array Index Out of Bound Exception and Arithmetic Exception.
- 2. Write a class that keeps a running total of all characters passed to it(one at a time) and throws an exception if it is passed a non-alphabetic character.
- 3. Write a program that takes a value at the command line for which the factorial is to be computed. The program must convert the string toits integer equivalent. Three possible user input errors can prevent the program from executing normally.
  - The first error occurs when the user provides no argument while executing the program, and an arrayIndexOutOfBoundsException is raised. You must write a catch block for this.
  - The second error is NumberFormatException which is raised in case the user provides a non-integer (float double) value at the command line.
  - The third error is IllegalArgumentException. This needs to be thrown manually if the value at the command line is 0.
- 4. Create a user-defined exception named CheckArgument to check the number of arguments passed through the command line. If the number of arguments is less than 5, throw the CheckArgumentexception, and print the addition of all the five numbers.
- 5. Write a Java program to create a custom Exception that would handle at least 2 kinds of Arithmetic Exceptions while calculating a given equation (e.g. X+Y\*(P/Q) Z-I).
- 6. Given an element write a program to check if an element(value) exists in ArrayList.
- 7. Write a program to convert LinkedList to ArrayList.
- 8. Write a program to iterate TreeMap in java.

#### Assignment 8: Keyboard input and string handling in Java

- 1. Write a Java program for calculating Factorial. Number should be taken through user input (Using Scanner, BufferedReader both).
- 2. Write a Java program to reverse a string. (String will be taken as user input through the console).
- 3. Write a Java Program to Find the Length of the String.
- 4. Write a Java Program to Remove the White Spaces from a String.
- 5. Write a Java Program to Use the Equals Method In a String Class.
- 6. Write a Java Program to Count and Replace the First Occurrence of a String.
- 7. Write a Java Program to Validate an Email Address Format.
- 8. Write a Java Program to Access the Index of the Character or String.
- 9. Write a Java Program to Find First and Last Occurrence of a given character in a String.
- 10. Write a Java Program to Store String Literals Using String Buffer.

	analytics techniques for	or extracting meaningful insights.				
2	To develop proficienc	y in data preprocessing, statistical analysis, and				
	machine learning for o	lecision-making.				
3	To introduce big data	technologies, cloud computing, and AI-based				
	applications in moder	n analytics.				
Objective:		•				
1	To explore data manage	ment, warehousing, and mining techniques for				
	structured analysis.					
2	To apply statistical meth	nods and data visualization for insightful				
	interpretation.					
3	To understand machine	learning concepts such as classification, clustering,				
	and predictive modelling	g.				
4	To introduce big data pl	atforms, cloud computing, and IoT in data-driven				
	applications.					
Pre-Requisite:						
1	Basic knowledge of stati	stics, programming (Python/R), and databases.				
Course Outcome:						
1	Explain data managen	nent, mining, and preprocessing techniques for				
	analytics.					
2	Apply statistical and r	nachine learning methods to analyze and				
	interpret data.					
3	Utilize big data techno	ologies, cloud computing, and IoT for data-				
	driven solutions.					
4	Implement machine le	earning models for real-world applications				
	using Python/R.

Module	Торіс	Sub-topics
number		
1	Introduction to	Brief idea about Data Warehousing, Architecture and Data
	Data	Flows, Data pre-processing before analysis, Data preparation,
	Management:	OLAP & OLTP, Case study.
2	Introduction to	Brief idea about Data Mining, It's goals and techniques,
	Data Mining:	Architecture and KDD Process, Knowledge representation
		methods.
3	Statistics and	Data Visualization, Summarize and describe data sets using a
	Analytics:	measures such as Central tendency and variability, Learn
		probability, Central Limit Theorem and much more to draw
		inferences
4	Introduction to Big	Understand the basic concepts of Big Data and Hadoop as
	Data Analytics:	processing platforms for Big Data, Managing Big Data - Learn
		and Use Hadoop Ecosystem tools for data ingestion, extraction
		and management. Introduction to Hive.
5	Cloud	Introduction to Cloud Computing, types, services, applications,
	Computing:	Security & research scope. Internet of Things:
6	Introduction to	Introduction to IOT and WSN, Basic concepts of Robotics
	IOT and WSN:	Using Arduino & Rasberry Pi Programming.
7	Introduction to	Introduction to artificial intelligence, Brief idea about Natural
	NLP & AI	Language Processing.
8	Basic concepts of	To implement linear regression, Data classification, Data
	Machine	clustering – To learn how to create segments based on
	Learning	similarities using K-Means and Hierarchical clustering, Case
		study using Python.
9	Applications of	Time series, Decision trees, Support Vector Machine, Neural
	Machine	Networks, Case Study Using MATLAB.
	Learning.	

#### List of Books Text Books:

- 1. "Data Mining : Concepts and Techniques" by Jiawei Han and Micheline Kamber
- "Artificial Intelligence and Soft Computing: Behavioral and Cognitive Modeling of the Human Brain" by Amit KonarLogic & Prolog Programming, Saroj Kaushik, New Age International
- 3. "Big Data" by Anil Maheshwari
- 4. "Wireless Sensor Netwroks" by Ian F. Akyildiz & Mehmet Can Vuran
- 5. "Wireless Ad Hoc and Sensor Networks : Theory and Applications" by Xian Yang Li
- 6. "Mastering Cloud Computing : Foundations and Applications Programming" by Rajkumar Buyya
- 7. "Fundamentals of Neural Networks: Architectures, Algorithms and Applications" by L. Fausett

Name of the Course: Data Science and Data Analytics Laboratory						
Course Code: MCA2	93	Semester: 2 <sup>nd</sup>				
Duration: 12 Weeks	S.	Maximum Marks: 100				
<b>Teaching Scheme</b>		Examination Scheme				
Practical: 3		Practical Sessional Internal continuous evaluation: 100				
Credit: 3		Practical Sessional external examination: 100				
Aim:						
1	To gain Kno	wledge of Various aspects of data science and data analytics.				
2	To enhance t Data, Data M	the ability to identify qualities of a good solution of AI, Big fining etc.				
3	To implemer problems.	nt learned analytical techniques and data science to solve				
Objective:						
1	Provide you scientist.	with the knowledge and expertise to become a proficient data				
2	Demonstrate that are vital	e an understanding of statistics and machine learning concepts for data science.				
3	Produce Pyt	hon code to statistically analyze a dataset.				
4	Critically ev communication	valuate data visualizations based on their design and use for ing stories from data.				
Pre-Requisite:						
1	Basic knowle	edge of statistics, programming (Python/R), and databases.				
Course Outcome:						
1	Explain how	data is collected, managed and stored for data science.				
2	Understand t applications	he key concepts in data science, including their real-world and the toolkit used by data scientists.				
3	Implement d	ata collection and data mining techniques using database.				
4	Understand	handling of big data.

CO4	3	3	3	2	3	2	2	1	1	2	2	3	3	3	3

Module number	Торіс	Sub-topics
1	Introduction to Data Management:	<ol> <li>Write a program for displaying reversal of a number.</li> <li>Implement python script to read person's age from keyboard and display whether he is eligible for voting or not.</li> </ol>

		3. Implement python script to check the given year is leap
		year or not.
		<ol> <li>Implement Python Script to generate prime numbers series up to n</li> </ol>
		5. To display elements of list in reverse order.
		<ol> <li>Implement python script to accept line of text and find the number of characters, number of vowels and number of blank spaces in it.</li> </ol>
		7. Write a program which makes use of function to display all such numbers which are divisible by 7 but are not a multiple of 5, between 1000 and 2000.
		Implement a python script for factorial of number by using recursion.
2	Introduction to Data Mining:	<ol> <li>Write a program which accepts a sequence of comma- separated numbers from console and generate a list and a tuple which contains every number. Suppose the following input is supplied to the program: 34, 67, 55, 33, 12, 98. Then, the output should be: ['34', '67', '55', '33', '12', '98'] ('34',67', '55', '33', '12', '98').</li> </ol>
		<ol> <li>Write Python script to copy file contents from one file to another.</li> </ol>
		<ol> <li>Implement a python script to check the element is in the list or not by using Linear search &amp; Binary search.</li> </ol>
		<ol> <li>Implement a python script to arrange the elements in sorted order using Bubble, Selection, Insertion and Merge sorting techniques.</li> </ol>
		5. Write a python program by using exception handling mechanism.
		6. Write a python program to perform various database operations (create, insert, delete, update).
3	Statistics and	1. Write a program to compute summary statistics such as
	Analytics:	mean, median, mode, standard deviation and variance of
		the given different types of data. Write a program to demonstrate Regression analysis with
		residual plots on a given data set.

7	Introduction to	Python lab for text analysis
	NLP & AI	
		1. Choose some book-length document and download it.
		2. Count its characters, lines and words.
		3. Count sentences, vocabulary, and the like.
		4. Show collocations, common context, concordance, and
		similar relationships among the words.
		5. Plot a lexical dispersion or two.
		6. Plot a frequency distribution of the most common words.
8	Basic concepts of	1. Write a program to demonstrate the working of the
	<b>Machine Learning</b>	decision tree-based ID3 algorithm.
		2. Write a program to implement the Naïve Bayesian
		classifier for a sample training data set stored as a .CSV
		file.
9	Applications of	1. Write a program to implement k-Nearest Neighbour
	Machine Learning.	algorithm to classify the iris data set.
		2. Write a program to implement k-Means clustering
		algorithm to cluster the set of data stored in .CSV file.

### Course Name: General Studies & Current Affairs - II Credit: 0.5

## Course Code: MCA(GS)201

### **Lecture Hours: 20**

Name of the Course: General Studies & Current Affairs - II						
Course Code: MCA(	GS)201	Semester: 2 <sup>nd</sup>				
Duration: 20 Hrs.		Maximum Marks: 100				
Teaching Scheme		Examination Scheme				
Theory: 2		End Semester Exam: 100				
Tutorial: 0		Continuous Assessment: 100				
Credit: 0.5						
Aim:						
1	To enhance quantitative solving in professional e	aptitude and logical reasoning for effective problem- nvironments.				
2	To develop oral, listenin interactions.	g, and reading communication skills for workplace				
3	To equip students with p correspondence and pres	practical communication skills, including professional sentations.				
Objective:						
1	To strengthen quantitativ	ve and logical reasoning for analytical decision-				
2	To improve verbal and n articulation and clarity.	on-verbal communication skills, including				
3	To enhance listening an processing.	d reading comprehension for better information				
4	To develop practical con business communication	nmunication techniques, such as presentations, , and public speaking.				
Pre-Requisite:						
1.	Basic understanding of H concepts.	English language and fundamental mathematical				
Course Outcome:						
1.	Apply quantitative aptit professional scenarios.	ude and logical reasoning skills in				
2.	Demonstrate effective o	ral and written communication for workplace				
-	interactions.					
3.	Exhibit active listening	and reading comprehension for better				
4.	Implement practical con presentations and busine	nmunication strategies, including professional ess communication.

Theory: 3		End Semester Exam: 70				
Tutorial: 1		Continuous Assessment: 30				
Credit: 3						
Aim:	·					
1	To understand the syst	em architecture of an operating system				
2	Ability to apply CPU s	scheduling algorithms to manage tasks.				
3	Initiation into the proc and allocation policies	ess of applying memory management methods				
4	Knowledge of method deadlock.	s of prevention and recovery from a system				
Objective:						
1	To deliver a detailed known operating System.	owledge of integral software in a computer system –				
2	To understand the work	ings of an operating system as a resource manager.				
3	To familiarize the stude	ents with Process and Memory management.				
4	To describe the problem	of process synchronization and its solution.				
Pre-Requisite:	·					
1	You should know about	Computer Architecture and Organization.				
2	Proficiency in C or anoth	ner programming language.				
3	Familiarity with Assemb	ly language.				
Course Outcome:	1					
1	Understand Operating operating system func	System Concepts: Gain knowledge about tions, generations, processes, and threads.				
2	Analyze process mana concurrency mechanis	agement, scheduling algorithms, and sms for efficient resource allocation.				
3	Evaluate memory mar mechanisms in operation	nagement techniques, file systems, and security ing systems.				
4	Learn File Handling a File, Device, and Disk	and Process Control: Understand the basics of k Storage Management

# **Course Name: Environment and Ecology**

### Credit: 2

### **Course Code: MCA306**

#### Lecture Hours: 40

Name of the Course: Environment and Ecology					
Course Code: MCA3	06	Semester: 3 <sup>rd</sup>			
Duration: 40 Hrs.		Maximum Marks: 100			
<b>Teaching Scheme</b>		Examination Scheme			
Theory: 3		End Semester Exam: 70			
Tutorial: 1		Continuous Assessment: 30			
Credit: 2					
Aim:					
1	Imparting knowledge ab	out the environment and ecosystem around us.			
2	Imparting knowledge ab importance of their conse	out the natural resources, biodiversity, and the ervation			
3	Environmental Manager	ment and Pollution Control			
Objective:					
1	Students will gain know	ledge about the environment and ecosystem.			
2	Students will learn abou of their conservation	t natural resources, biodiversity, and the importance			
3	To make students aware on humans and the ecos	of problems of environmental pollution, its impact ystem, and control measures.			
4	At the end of the course and environmental mana	, students will learn about waste disposal measures agement.			
Pre-Requisite:					
1	NA				
Course Outcome:					
1	Define Environmental f	factors and the basic components of the ecosystem.			
2	Understand and explain	the importance of Plantation.			
3	List the pollutants and a environmental pollution	analyze the importance of reducing/ controlling			
4	Analyze the importance	of Biohazards, Environmental and Social safety			

COs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3

CO2	3	2	3	2	2	3	1	2	2	1	1	1	3	1	3
CO3	2	2	1	3	1	2	3	3	1	1	2	3	3	3	1
CO4	1	3	1	3	3	2	2	3	2	3	2	1	1	1	2

Module number	Торіс	Sub-topics
I	Overview	Basic ideas of environment, basic concepts, man, society & environment, their interrelationship Mathematics of population growth and associated problems, Importance of population study in environmental engineering, the definition of resource, types of resource, renewable, non-renewable, potentially renewable, effect of excessive use vis-à-vis population growth, Sustainable Development. Materials balance: Steady state conservation system, steady state system with non-conservative pollutants, step function. Importance, scope and principles of EIA.
Π	Ecology	Elements of ecology: System, open system, closed system, the definition of ecology, species, population, community, definition of ecosystem- components types and function. (1L) Structure and function of the following ecosystem: Forest ecosystem, Grassland ecosystem, Desert ecosystem, Aquatic ecosystems, Mangrove ecosystem (special reference to Sundar ban); Food chain [definition and one example of each food chain], Food web.( 2L) Biogeochemical Cycle- definition, significance, flow chart of different cycles with only elementary reaction [Oxygen, carbon, Nitrogen, Phosphate, Sulphur]. (1L) Biodiversity- types, importance, Endemic species, Biodiversity Hot-spot, Threats to biodiversity, Conservation of biodiversity.( 2L)
III	Air Pollution	Atmospheric Composition: Troposphere, Stratosphere, Mesosphere, Thermosphere, Tropopause and Mesopause. (1L) Energy balance: Conductive and Convective heat transfer, radiation heat transfer, simple global temperature model [Earth as a black body, earth as albedo], Problems.(1L) Green house effects: Definition, impact of greenhouse gases on the global climate and consequently on sea water level, agriculture and marine food. Global warming and its consequence, Control of Global warming. Earth's heat budget.(1L) Lapse rate: Ambient lapse rate Adiabatic lapse rate, atmospheric stability, temperature inversion (radiation inversion).(2L) Atmospheric dispersion: Maximum mixing depth, ventilation coefficient, effective stack height, smokestack plumes and Gaussian plume model.(2L) Definition of pollutants and contaminants, Primary and secondary pollutants: emission standard, criteria pollutant. Sources and effect of different air pollutants- Suspended particulate matter, oxides of carbon, oxides of nitrogen,

		oxides of sulphur, particulate, PAN. (2L) Smog, Photochemical smog and London smog. Depletion Ozone layer: CFC, destruction of ozone layer by CFC, impact of other green-house gases, effect of ozone modification. (1L) Standards and control measures: Industrial, commercial and residential air quality standard, control measure (ESP. cyclone separator, bag house, catalytic converter, scrubber (ventury), Statement with brief reference). (1L)
IV	Water Pollution	Pollutants of water, their origin and effects: Oxygen demanding wastes, pathogens, nutrients, Salts, thermal application, heavy metals, pesticides, volatile organic compounds.DO, 5-day BOD test, Seeded BOD test, BOD reaction rate constants, Effect of oxygen demanding wastes on river [deoxygenating, reaeration], COD, Oil, Greases, pH. Lake: Eutrophication [Definition, source and effect]. Waste water standard [BOD, COD], Water Treatment system, primary and secondary treatments, tertiary treatment definition. Water pollution due to the toxic elements. USEPA and WHO guidelines for drinking water.
V	Lithosphere	Lithosphere; Internal structure of earth, rock and soil (1L). Solid Waste: Municipal, industrial, commercial, agricultural, domestic, pathological and hazardous solid wastes; Recovery and disposal method- Open dumping, Land filling, incineration, composting, recycling. Solid waste management and control (hazardous and biomedical waste).(2L)
VI	Noise pollution	Definition of noise, effect of noise pollution, noise classification [Transport noise, occupational noise, neighbourhood noise] (1L) Definition of noise frequency, noise pressure, noise intensity, noise threshold limit value, equivalent noise level, L10 (18hr Index) ,n Ld.Noise pollution control. (1L)
VII	Environmental Management	Environmental impact assessment, Environmental Audit, Environmental laws and protection act of India, Different international environmental treaty/ agreement/ protocol. (2L)

#### List of Books Text Books:

- 1. Environmental Science, Cunningham, TMH
- 2. Environmental Science, Wright & Nebel, PHI
- 3. Fundamentals of Ecology, Dash, TMH
- 4. Environmental Pollution Control Engineering, C.S.Rao, New Age International
- 5. Environmental Pollution Analysis, S.N.Khopkar, New Age International
- 6. Environmental Management, N.K. Oberoi, EXCEL BOOKS
- 7. Environmental Management, Mukherjee, VIKAS
- 8. Ecosystem Principles & Sustainable Agriculture, Sithamparanathan, Scitech

#### **Course Code: MCA307**

#### **Lecture Hours: 40**

Name of the Course: Statistics and Numerical Techniques					
<b>Course Code: MCA3</b>	07	Semester: 2nd			
Duration: 40 Hrs.		Maximum Marks: 100			
<b>Teaching Scheme</b>		Examination Scheme			
Theory: 3		End Semester Exam: 70			
Tutorial: 1		Continuous Assessment: 30			
Credit: 3					
Aim:					
1.	To develop a strong theo	retical foundation in statistical methods and			
	numerical techniques for	solving computational problems.			
2.	To equip students with n	nathematical tools for data analysis, approximation,			
	and problem-solving in c	computing.			
3.	To enhance analytical th	inking for decision-making and error estimation in			
	computational models.				
Objective:					
1.	To introduce fundament	al statistical concepts like probability, distributions,			
	and hypothesis testing.				
2.	To explore numerical tec	chniques for root finding, interpolation,			
	differentiation, and integ	gration.			
3.	To analyze error propaga	ation and the stability of numerical algorithms.			
4.	To apply statistical and r	numerical methods in computing and real-world			
Pre-Requisite:	problem solving.				
1.	Basic knowledge of alge	bra, calculus, and programming logic.			
Course Outcome:	88.				
1.	Explain fundamental sta	tistical and numerical methods used in			
	computing.				
2.	Apply probability and st	tatistical techniques to analyze data and draw			
	conclusions.				
3.	Utilize numerical techni	ques to solve mathematical and computational			
	problems.				
4.	Evaluate the accuracy, e	fficiency, and limitations of statistical and			
	numerical methods.	-			

## **CO-PO-PSO Mapping**

COs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2	PSO3
CO1	3	2	1	1	2	1	1	0	0	1	0	2	2	3	2
CO2	3	3	2	2	2	2	1	0	0	1	0	2	2	3	2
CO3	3	3	2	2	2	1	1	0	0	1	1	3	3	2	3
CO4	3	3	2	2	2	2	1	1	0	1	1	3	3	3	3

Module	Торіс	Sub-topics
1	Descriptive Statistics and Curve Fitting	Statistics - measure of central tendency, dispersion (Moments, Skewness & Kurtosis). Least square curve fitting - linear & non- linear.
2	Probability and Parameter Estimation	Probability, introduction to mass function, density function, distribution function (Binomial, Poisson, Normal), estimation of parameters (unbiasedness-concept of noise/error, consistency).
3	Interpolation and Inverse Interpolation	Interpolation-Newton's Forward, Backward, Sterling & Bessel's Interpolation formulae, Lagrange's Interpolation. Inverse Interpolation.
4	Numerical Integration	Integration - Trapezoidal, Simpson's 1/3rd, Weddle's Rule, Romberg Integration, Gauss- Legendre two & three points formula, Newton Cotes Formula.
5	Root Finding Methods	Solution of any equation - Method of Iteration, Method of Bisection, Newton-Raphson Method, Regula-Falsi method and Secant Method.
6	Solving Linear and Differential Equations	<ul> <li>Solution of system of linear equations - Gauss Elimination Method, Gauss-Jacobi, Gauss-Seidel, LU factorization and Tri- diagonalization.</li> <li>Solution of differential equations - Picard's method, Euler- modified method, Taylor's Series method, Runge-Kutta method, Milne's Predictor-Corrector method.</li> </ul>

### Course Name: General Studies & Current Affairs - III Credit: 0.5

Course Code: MCA(GS)301

**Lecture Hours: 20** 

Name of the Course: General Studies & Current Affairs - III							
Course Code: MCA(	GS)301	Semester: 3 <sup>rd</sup>					
Duration: 48 Hrs.		Maximum Marks: 100					
Teaching Scheme		Examination Scheme					
Theory: 2		End Semester Exam: 100					
Tutorial: 0		Continuous Assessment: 100					
Credit: 0.5							
Aim:							
Sl. No.							
1	To enhance quantitative solving in professional e	aptitude and logical reasoning for effective problem- nvironments.					
2	To develop oral, listenin interactions.	g, and reading communication skills for workplace					
3	To equip students with p correspondence and pres	practical communication skills, including professional entations.					
<b>Objective:</b>							
Sl. No.							
1	To strengthen quantitativ making.	ve and logical reasoning for analytical decision-					
2	To improve verbal and n articulation and clarity.	on-verbal communication skills, including					
3	To enhance listening an processing.	d reading comprehension for better information					
4	To develop practical con business communication	nmunication techniques, such as presentations, , and public speaking.					
Pre-Requisite:							
Sl. No.							
1.	Basic understanding of E concepts.	English language and fundamental mathematical					
Course Outcome:							
1.	Apply quantitative aptitiprofessional scenarios.	ude and logical reasoning skills in					
2.	Demonstrate effective o interactions.	ral and written communication for workplace					

**-** 79 **}** 

3.	Exhibit active listening and reading comprehension for better understanding and response.
4.	Implement practical communication strategies, including professional presentations and business communication.

CO4	2	1	1	0	1	1	0	0	1	3	1	2	1	1	1

Module	Торіс	Sub-topics
1	History	<ol> <li>1. Pre sultanate age: Md. Bipin Karim, Aluptagin, Sabuktagin, Sultan Mamud, Md. Ghori</li> <li>2Delhi Sultanate: Slave dynasty, Khalji dynasty, Tughlaw dynasty, Sayyed dynasty, Lodhi dynasty</li> <li>3. Bhakti and Sufi movement: Kabir, Gurunanak, Chaitanya, Namdev</li> <li>4. Mughal Period: Babur, Humayun, Sher shah suri, Akbar, Jehangir, Shah Jahan, Aurangzeb, Aministrative system, Din-i- ilahi, Art and architecture, Land revenue system</li> </ol>
2	Geography	<ol> <li>Drainage system         <ul> <li>Types of river (Perennial, Non perennial, Inland drainage)</li> <li>Courses of river: Upper, Middle, Lower courses</li> <li>Landforms carved out by river based on the courses.</li> <li>Basic terminologies: Antecedent rivers, Consequent rivers, Fault guided river, Tributary, Distributary</li> <li>Indian river system (Himalayan, Peninsular, Coastal)</li> </ul> </li> <li>Types of Irrigation in India         <ul> <li>Well</li> <li>Tanks</li> <li>Canal</li> </ul> </li> <li>Problems of irrigation in India as per 2011 census</li> <li>Clouds and Precipitation: Forms of precipitation, Types of rainfall, Types of clouds.</li> </ol>
3	Macro Economics	<ol> <li>National income- Concept of GDP, GNP, NNP both in FC &amp; MP, PCI</li> <li>Tax – Concept of TAX , objective of TAX, Direct &amp; Indirect Tax, Progressive, Regressive ∝ tax.</li> </ol>

		3. RBI & Banking- Traditional Functions of RBI, CRR, SLR,
		REPO, Reverse repo, MSF, LAF market, capital market, capital
		market, Money market, FOREX.
		4. Budget- concept of budget, components of budget, different
		types of deficit.
		5. Keynesian outlook- IS,LM & different multipliers.
		6. Inflation & Deflation- Inflation & its impact, Deflation & its
		impact, WPI, CPI, GDP deflator.
4	Constitution	1. Central State relation, Interstate relation,
		2. Supreme Court-Appointment of Chief Justice, Acting Chief
		Justice, Qualification, Oath or Affirmation, Tenure of Judge,
		Removal of Judges, Salaries & allowance, Adhoc Judge,
		Procedure of the court, write jurisdiction, Power of Judicial
		review
		3. High Court-Appointment of Chief Justice, Acting Chief Justice,
		Qualification, Oath or Affirmation, Tenure of Judge, Removal of
		Judges, Salaries & allowance, Adhoc Judge, Procedure of the
		court, write jurisdiction, Power of Judicial review
		4. Duties& Powers of Attorney & Advocate General in Brief
		5. Panchavati Rai- Three tier system. Different committees
		recommendation
		6 Municipality Municipal Council & Corporation Official
		Languages & related Articles

Course Code: MCA3	01	Semester: 4 <sup>th</sup>
Duration: 40 Hrs.		Maximum Marks: 100
<b>Teaching Scheme</b>		Examination Scheme
Theory: 3		End Semester Exam: 70
Tutorial: 1		Continuous Assessment: 30
Credit: 3		
Aim:		
1	Develop a deep understa principles.	nding of distributed database architecture and design
2	Equip students with skill managing transactions.	s for optimizing distributed query processing and
3	Enable application of dat for real-world problem-s	ta warehousing, OLAP, and data mining techniques olving.
Objective:		
1	Understand the architect	ture and design of distributed database systems.
2	Apply techniques for dis	stributed query processing and optimization.
3	Master the concepts of c warehousing.	listributed transaction processing and data
4	Utilize data mining metl clustering.	hods such as association analysis, classification, and
Pre-Requisite:		
1	Fundamentals of Databa Computer Networks, Pro	se Management Systems, Basic Knowledge of ogramming Skills & Operating systems
Course Outcome:		
1	Understand and explain distributed database sy	in the architecture and design principles of ystems.
2	Apply methods and te optimization.	chniques for distributed query processing and
3	Understand the concept warehousing, and OLA	ots of distributed transaction processing, data AP technology.
4	Apply methods and te classification, and clus	chniques for data association analysis, stering.

### Credit: 3

#### **Course Code: MCA401B**

#### Lecture Hours: 40

Name of the Course: Image Processing					
Course Code: MCA4	01B	Semester: 4 <sup>th</sup>			
Duration: 40 Hrs.		Maximum Marks: 100			
Teaching Scheme		Examination Scheme			
Theory: 3		End Semester Exam: 70			
Tutorial: 1		Continuous Assessment: 30			
Credit: 3					
Aim:	-				
1	Equip students with a so techniques used in image	lid understanding of the core principles and e processing.			
2	Enable students to apply manipulate digital image	image processing methods to analyze, enhance, and es for various applications.			
3	Prepare students to solve analysis, computer vision	e complex real-world problems related to image n, and pattern recognition.			
Objective:	-				
1	Understand the fundat processing.	mental principles and techniques of image			
2	Apply methods to enh	ance and manipulate digital images.			
3	Develop skills in imag	ge analysis and computer vision.			
4	Solve real-world prob	lems using image processing techniques.			
Pre-Requisite:					
1	Fundamentals of Databa Computer Networks, Pro	se Management Systems, Basic Knowledge of ogramming Skills & Operating systems			
Course Outcome:					
1	To study the image fu necessary for image p	ndamentals and mathematical transforms rocessing.			
2	To study the image en	hancement techniques			
3	To study image restor	ation procedures			
4	To study the image co	mpression procedures

Name of the Course:	Parallel Programming				
Course Code: MCA4	01C	Semester: 4 <sup>th</sup>			
Duration: 40 Hrs.		Maximum Marks: 100			
<b>Teaching Scheme</b>		Examination Scheme			
Theory: 3		End Semester Exam: 70			
Tutorial: 1		Continuous Assessment: 30			
Credit: 3					
Aim:					
1	Equip students to write e	fficient parallel programs for faster computation.			
2	Prepare students for indu computing.	stry applications in high-performance and big-data			
3	Foster critical thinking a with parallel techniques.	nd innovation in solving computational challenges			
<b>Objective:</b>					
1	Understand the fundar processing.	nental principles and techniques of image			
2	Apply methods to enh	nance and manipulate digital images.			
3	Develop skills in imag	ge analysis and computer vision.			
4	Solve real-world prob	lems using image processing techniques.			
Pre-Requisite:					
1	Fundamentals of Databa Computer Networks, Pro	se Management Systems, Basic Knowledge of ogramming Skills & Operating systems			
Course Outcome:	Γ				
1	Understand the evolut with respect to lawsan mobility for data, hard	ion of High-Performance Computing (HPC) d the contemporary notion that involves ware devices and software agents			
2	Understand, appreciate in Problem Solving.	te and apply parallel and distributed algorithms			
3	Evaluate the impact of algorithm formulation	f network topology on parallel/distributed usand traffic their performance.			
4	Gain hands-on experie parallel and distributed	ence with agent-based and Internet-based d programming techniques.

# **Course Name: Compiler Design**

### Credit: 3

#### **Course Code: MCA402A**

#### Lecture Hours: 40

Name of the Course:	Compiler Design				
Course Code: MCA4	02A	Semester: 4 <sup>th</sup>			
Duration: 40 Hrs.		Maximum Marks: 100			
<b>Teaching Scheme</b>		Examination Scheme			
Theory: 3		End Semester Exam: 70			
Tutorial: 1		Continuous Assessment: 30			
Credit: 3					
Aim:					
1	To gain Knowledge of	Various aspects of a Compiler.			
2	To enhance Ability to DFA etc.	identify qualities of a good solution of NFA,			
3	To implement NFA to parsing methods to sol	DFA conversion techniques and different ve problems.			
Objective:					
1	Provide you with the kn compiler design.	owledge and expertise to become a proficient			
2	Demonstrate an underst that are vital for compile	anding of parsing and polishing expression concepts er design.			
3	To produce DFA from	an NFA to understand a basic compiler.			
4	Critically evaluate NFA	based on their design and create DFA from that.			
Pre-Requisite:					
1	Proficiency in data struprogramming.	acture, graph theory, automata theory and C			
Course Outcome:					
1	Understand fundamenta different phases of the c	ls of compiler and identify the relationships among ompiler.			
2	Understand the applicat production rules, parsing	on of finite state machines, recursive descent, g, and language semantics.			
3	Analyze & implement i back-end, and a small se	required module, which may include front-end, et of middle-end optimizations.			
4	Use modern tools and te	chnologies for designing new compiler.

### **Course Code: MCA403**

### Lecture Hours: 40

Name of the Course: Values and Ethics						
Course Code: MCA4	03	Semester: 4 <sup>th</sup>				
Duration: 40 Hrs.		Maximum Marks: 100				
Teaching Scheme		Examination Scheme				
Theory: 3		End Semester Exam: 70				
Tutorial: 1		Continuous Assessment: 30				
Credit: 1						
Aim:						
1	To gain kno	wledge of various aspects general ethics and energy in life.				
2	To get abili	ty to identify relations among technology, engineering and				
	human aspe	ects				
3	To impleme	ent values in various aspects of life with morality.				
Objective:						
1	An ability to	analyze a problem, then identify and formulate the computing				
2	Developmen	t of Solutions- An ability to design implement and evaluate a				
-	Computer ba	used problems with appropriate consideration for public health				
	and safety, c	ultural, societal and environmental considerations.				
3	Conduct inve	estigations of complex problem – An ability to design and				
	conduct expe	eriments, as well as to analyze and interpret data to reach valid				
	conclusions.					
4	An ability to	analyze a problem, then identify and formulate the computing				
	requirements	s appropriate to its solution				
Pre-Requisite:	1					
1	Knowledge in	n General Studies, Fundamentals of Computers, Proficiency in				
	Communicati	ion Skills.				
Course Outcome:	1					
1	Understandi	ng the importance and role of science, technology and				
	engineering	as knowledge and social-professional world, know the				
-	technologica	l growth.				
2	To realize th	e importance of energy as resource and crisis in energy,				
	understand th	he effect of degradation and pollution of environment,				
-	introduce eco	o-friendly technology.				
3	To choose th	e appropriate technology for development, understand the				
	transfer, asse	essment and impact of technology, learn the role of human				
	resource in e	ngineering, man-machine interaction, impact of automation,				
	introduce hu	man-centric technology.				
4	To determine	e the relation between profession and human values like value				

crisis in society, life, personality and mental health. know the
role/importance of values in law, justice in Indian perspective, know the
aesthetic values, learning the relation between morality and ethics and
virtue ethics.
